EAS opens second High Point manufacturing plant, adding 60 jobs

HIGH POINT, NC – Environmental Air Systems is adding 60 jobs as the company expands its Guilford County construction manufacturing / structural steel fabrication manufacturing operations.

EAS has opened its second High Point facility – a 100,000-square foot operation at 3501 Jamac Rd. in south High Point – at the intersection of Jamac Rd. and Triangle Lake Rd. The other High Point plant is located at 623 McWay Dr.

- Both of the company's High Point facilities manufacture custom modular products – such as air handling units, mechanical equipment rooms, central utility plants, mechanical penthouses, and data centers.
- The company's clients include hospitals, pharmaceutical companies, educational facilities, and "mission critical" data clients.

In addition to the two High Point facilities, EAS also has a duct and pipe fabrication facility at 521 Banner Ave. and a steel fabrication facility at 8307 Triad Drive in Greensboro, as well as a division office in Raleigh.

"The new 'EAS Jamac Plant' is an expansion of our original nearby High Point operation," said Brian Evans, chief operating officer. "We are proud to now have approximately 250,000 square feet of manufacturing space in Guilford County – to better serve our continually growing customer base."

"It is fascinating to tour the EAS plant and see the company's impressive products," said Loren Hill, president of the High Point Economic Development Corporation. "We are proud that the company has been successful in High Point and that they employ such a skilled workforce."

Jobs will be filled over the next 4-6 weeks. The company is currently seeking pipe welders, steel welders, steel fabricators, and heavy assemblers.

- Job seekers may apply in person at EAS, 623 McWay Dr., High Point NC 27263.
 - Persons interested in learning more may contact Mike Fitzpatrick, EAS Human Resources Department, at 336-861-0047.

ABOUT EAS (<http://easinc.net>)

The company was founded by James R. Bullock and Edward Humble in early 1953. Its primary business focus then was to provide quality heating, air conditioning, and plumbing products and services to central North Carolina. In 1972, Environmental Air Systems was created for the manufacturing of custom air handling equipment. Today, James R. Bullock Jr. and William N. Bullock, sons of the original founder, provide the executive leadership for EAS.
